"Features that make a Great Car Greater"

LOVEJOY & FOUR WHEEL SHOCK ABSORBERS BRAKES

LAST year a great car, now a host of added features make Pontiac Six greater than ever. To Pontiac's proven dependability have been added the enthralling beauty of new Fisher bodies, and new high radiator; the new safety and security of positive four-wheel brakes; the new ease and comfort of Lovejoy Shock Absorbers; a new pride of ownership in a car that is essentially modern, up-to-date.

Ask about the amazingly low prices of the New Series Pontiac Six.

Ask your dealer about the G.M.A.C. Deferred Payment Plan which makes buying easy.

### Municipal Hospital A Live Issue

The present attitude of the community toward the modern hospital is evidence of how rapidly it has advanced in order to keep pace with the progress of medical knowledge.

Well within the memory of most adults in every community is the time when the hospital was a place of distressing and ghastly conditions. To the poor citizen it was a place of last resort, or at the best, of dire economic necessity.

We have travelled far within a generation. When private wards were first introduced they were of simple type, merely a separation and isolation from the public ward, but they have been taking on yearly increase in cost and luxury of service, until today the hospital is looked upon as a natural resort in sickness for citizens of all classes.

Recognizing the fact that the municipal hospital is best able to place at their command the most up-to-date curative equipment, communities where they are now in operation are constantly and rapidly making better demands upon its service, with a resultant effort upon the part of the hospital to meet the community's requirements.

We should as members of this community take the first step, that is, in the establishment of a municipal hospital, to give proper and adequate curative equipment to the community as a whole, that those who are unfortunate enough to require medical attention, will be able to receive it in the right kind of institution in our district and in a hospital in which the whole populace has a vital interest.

In the health of a nation the theory "Let Well Enough Alone" is suicidal. Your community is part of our nation. Protect its health by the establishment of a municipal hospital.

Dr. Torg Leaving University of Alberta

Dr. H. M. Torg, who has been president of the University of Alberta since its organization twenty years ago, has tendered his resignation to take effect at the end of the current college year, in order that he may accept the permanent chairmanship of the National Council of Scientific Research with headquarters probably at Ottawa.

The matter of the selection of a successor to Dr. Torg as head of the University will be considered at an early date by the Alberta Government in order that the new appointee may be ready to take over at the opening of the 1928 fall term.

Royalty No. 8, Well A Producer

An addition to the number of producing oil wells in the Turner Valley field has been made by the blowing into production of Royalty No. 8, during the past week, when a flow of wet gas estimated at 17,000,000 cubic feet per day was encountered at a depth of 2,725 feet. Royalty No. 4, well, the outstanding producer of the Dominion, is yielding a steady flow of some 19,000,000 cubic feet of gas per day from a depth of over 600 barrels of 73 per cent. gravity naptha.

### LEGAL NOTICE

MUNICIPAL DISTRICT OF BERTWAIN, No. 271

NOTICE IS HEREBY GIVEN that, under the provisions of The Tax Recovery Act, 1922, and amendments thereto, the following described lands will be offered for sale, by public auction at the Municipal Office, in the Hamlet of Sibbald, in the province of Alberta, on Saturday, May 12th, 1928, at 2 o'clock p.m.:

Lot 3, Block 1, Sibbald.	

Each parcel will be offered subject to a reserve bid and the reservations contained in the existing certificates of title, and reserving thereout all mines and minerals.

Redemption may be effected by payment of the full amount of arrears at any time prior to the sale. Terms cash.

DATED at Sibbald, this 15th day of March, 1928.

W. LINKLATER,  
Secretary-Treasurer.

Young People to Attend Institute of Cooperation

Arrangements are being made by the committee in charge of the organization of the Alberta Institute of Cooperation, which will be held during the last week in June, to bring in 125 young men and women between the ages of 17 and 21 inclusive from all parts of the province to attend a special free course on cooperation.

The young people to be given the advantage of this free course will be selected from communities to be made by local organizations such as Junior U.P.A. locals, Women's Institute Girls' Clubs, C.S.E.T. and C.L.T. groups, Boy Scouts and similar bodies and all the expenses of those selected will be met from the money in the hands of the board of trustees of the surplus wheat board fund.

Special classes will be put on for the benefit of these young people under the supervision of Prof. H. W. Marchie, of the University of Manitoba, and W. M. Drummond, who is returning to Alberta from Harvard University. In order that the selection may be made at an early date, the committee is asking that applications be in the hands of the Registrar of the Institute of Cooperation, Legislative Buildings, Edmonton, not later than May 25th.

A meeting of the delegates of the Alberta Wheat Pool will be held on Tuesday, May 29th, in Calgary for the purpose of considering the Grain Pool for Alberta, policy of the Pool elevator system for the coming season, the resign campaign, and any other matters of general interest to the Pool.

## Eliminating Waste

Value Of Scientific Effort As Related To Production

The Vancouver Province publishes well-informed and valuable editorial articles under the heading "Waste." It deals with wheat, fruit, lumber, minerals and fish. In each of these classifications of products, this country has been wasteful either by way of actual waste of good material or of failure to produce the best of which it is capable.

The Province refers to the quantity of comparatively low grade wheat that was grown last season. "So far as Canada is raising poor wheat that she might raise good wheat," the Province says, "is wasting her opportunities and the labor of her farmers and is jeopardizing her reputation as the grower of high-grade grain." This is quite true and this is also the primary reason why trained agriculturists in Alberta recently promoted a province-wide campaign for pure seed. It can be said, nor does the Province say, that it is possible always to grow grain of the highest grade. And yet, it is true that in early years, late rain and early snow affected the quality. But year in and year out, the quality will be higher if constant attention is paid to sound seed and to the weed evil. What greater care would mean increased revenue to the farmer and the population they can easily estimate by comparing the prices received for No. 1 and No. 2 Northern with those for No. 3 and the lower grades.

We in this province are not so closely concerned with waste in fish catching, but we should not neglect the fact that increased values wrought from our natural resources anywhere in the Dominion in the end affect trading conditions in Calgary and Alberta.

Fortunately, there is a national organization in Canada which is doing scientific effort as related to production of all sorts. Science has done and is now doing great things in eliminating waste and in adding to the value of man's efforts. This is as true in the field of agricultural industry as it is in the field of manufacturing industry, such as the fish. The fruits of knowledge are open to the use of all who are alert and ambitious. We have many complaints about conditions in this country. Actually we are much better off than most of us realize and better off than those in many other lands. But as the Vancouver Province rightly says, "there would be no complaints if we use our natural resources to the best advantage and not waste it."—Calgary Herald.

## Showered Her Gratitude

Mother Rewarded Her School Teacher In Unusual Way

A charming young school teacher who has classes of children of about eight and nine in a school in Bronx tells this story: Recently a mother called to discuss her daughter's progress and behavior. These were reported to be excellent and the parent departed in fine humor. The next day the little girl tripped up to the teacher's desk and handed her a bundle with the word that it came from her mother. The teacher thought it was a gift to say "thank you." Then she put it away hastily in a desk drawer. It was a bottle of Scotch.

## Made To Suit

A young mother just returned from India had engaged a new nurse for her baby. "I don't know what the matter, madam, but the little one cries and cries. I can do nothing to help it." The mother thought for a moment. Then, brightening up, she said:—"I remember now. Baby's last nurse was a black one. You will find the over-polish on the third shelf of the kitchen cupboard."

Judge: Only married a week and you beat your wife? A month's imprisonment will cure you.

Husband: It's a bit tough spoiling her honeymoon like that.

In Canada, the forest is second only to agriculture in the value of its products.

Witness: "Must I take the oath? I don't believe in God."

Judge: "It doesn't matter. As you go believe in jail!"—Kasper, Stockholm.

W. N. U. 1731

## All Ancient Customs

Used At Most Weddings But Few People Know Why

Here are five wedding questions which few could answer, says a writer in *Answers*: Why does a bride wear a veil? Why is rice thrown over a bride couple as they leave the church? Why is the wedding ring put on the fourth finger of the left hand? Why is an old shoe thrown after a married couple as they drive to the station? Why have a wedding cake?

The veil is but the continuance of the ancient Eastern rule that no man save her husband should see a woman's face, and not even he until after the ceremony.

The throwing of rice is another Eastern custom. Rice is the staple food in the East, and throwing it symbolized a wish for plenty.

The choice of the fourth finger of the left hand for the ring is an old custom of pagan Rome. It was believed that a nerve went direct from that finger to the heart.

Shoe-throwing is another Eastern custom which we have adopted with a slight variation. Originally the bride's father gave an old shoe to the bridegroom as a symbol that he surrendered to him the parental right of guardianship of the daughter.

The wedding-cake is Roman in origin. It was a cake of flour, salt, and water was always eaten by Roman couples in the presence of the priest. It formed part of the marriage rite.

Finally, behind the question: "Who gives this woman to be married?" lies the accepted belief that a woman was a "chattel," like furniture!

## England the Music Maker

Supplies Every Civilized Country With Band and Orchestral Instruments

"The English are called an unmusical nation, but England makes the music of the world." This statement was made by Lieutenant-Colonel R. H. Tatton, the organizing director of the "Federation of British Bands and Orchestral Instruments," said Colonel Tatton, "go to every civilized country, and there are famous bands all over the world in which British-made instruments are used."

It was almost entirely a Continental trade before the war, but work as good in quality and as inexpensive as anything of the kind which is made on the Continent is now produced in this country, and music engraving is becoming a British industry.

"We export as many gramophones as gramophone records as all the rest of the world. Germany is a good customer for English gramophones and records. Italy buys more gramophones and records from England than she manufactures herself."

## The Lure Of The Farm

For City Dweller Usually Means Wish For A Rest

The week end to the city man's longing to live on a farm is the fact the longing is strongest in the spring, right when he has the greatest desire to quit work of all kind and spend the remainder of his day's in idleness. For this reason it looks as if his longing to own a farm has no connection whatever with farm work. He simply wishes to get away from town and do nothing. It is a farm residence he wants, and a farm spring, and he would like to have a beautiful field of wheat; but he doesn't wish to live in the field. That is not his idea of being a farmer. Possibly there are some few men in town who would really make good farmers but most of those who long for farm life at this season are thinking of complete rest.

## Had Passed Printing Age

A catalogue of farming implements sent out by a manufacturer found its way to a remote rural village, where it was evidently received with interest, for the firm got back a carefully-written, if somewhat clumsily expressed letter, asking for further particulars about one of the articles advertised.

To this, in the usual course of business, was sent a typewritten answer. By return of post, the manufacturer received this reply: "You need not print your letters to me, I can read writing."

A motorist says that pedestrians are not to be trusted. No, they are always up to some dodge or other.

The letter carrier expects everyone on his route to take things as they come.

## FEEDING AND WEANING YOUNG PIGS

Profit Depends To A Large Extent On Proper Treatment

The profit one makes in the raising of hogs depends to a larger extent than many suppose on the treatment the litter receives while they are quite young. Years of experience and scores of experiments on the experimental farms have justified the conclusion that the character of the feeding and management of the suckling and weaned pig has as great influence on the economy of production. Circular No. 61, of the Department of Agriculture, at Ottawa, recommends teaching the litter to eat three weeks before weaning. The use of a creep which will admit the little pig but not the mother, is recommended.

For best results at weaning time, sweet skim milk is regarded as the practical necessity, subsequently non-skim milk or buttermilk may be used. Mixings mixed with milk are easily digested and very nourishing. It is recommended also to scatter a few handfuls of dry grain from time to time in the bedding. This ensures the little pig taking exercise in hunting up the kernels. Overfeeding is a frequent cause of ill-health and stunting. If two litters a year are to be raised it may be necessary to wean the pigs at six weeks of age, but if the litters are more widely distributed they should not be taken from their mothers until they are two months old. This circular, written by Mr. G. E. Rothwell, of the Dominion Animal Husbandman, and his assistant, Mr. W. M. Dunsmuir, which is available at the Publications Branch of the Department, recommends diets not only for the weanlings but for all classes of hogs. It also gives very helpful advice on how to avoid overwork in hogs.

Vienna is Holding a "Pedestrians Week" For This Purpose. People who walk on the streets of Vienna do so in an improper manner, the police authorities claimed in announcing a "pedestrians week" when they will try to teach the public how to use the streets. A large body of trained policemen will daily invade all the principal thoroughfares, detain the impatient citizens and demonstrate to them how they must follow, cross, overtake and pass each other on the sidewalks and where and how to cross the streets.

Traveler (on boat): "You were sick the first three days of the trip and the captain gave you leave? Did you go for it?"

The New Deck Hand: "I didn't need to ask."

In the subterranean mining districts of 14 years of age are full-time wage earners.

Unless a man has scored at least one failure he is unable to appreciate success.

INTERRED ARMYMEN MAKE AVIATION HISTORY

The above is the most recent photograph of the three fliers who are the only ones ever to conquer the North Atlantic in a westerly non-stop flight and who also upset the old superstition about Friday the 13th being unlucky by conquering their history-making hop from Baldhead aerodrome in Ireland, to Greenly Island, Quebec, on the date. The first outside help to reach the fliers was by a Falmouth plane which reached Greenly on Sunday afternoon, April 15, at five o'clock and aboard which were Lieut. C. A. (Duke) Schiller, Dr. Louis Cuisinier and Mechanic Thibault. The picture above shows, from left to right: Captain Herman Kook, co-pilot of the Bremen; Dr. Ehrhard von Hornstein, financial backer, and Col. James E. Fitzmaurice, commandant of the Irish Free State air force and co-pilot of the Bremen.

## Road Programme Carried Out

More Than 7,000 Miles Built With Dominion Subsidy Since 1919

"Virtual completion of Canada's road building programme, begun in 1919, was accomplished in 1927, according to the recently published annual report of the Commissioner of Highways. Co-operation between the federal and Provincial governments of Canada, and within the Canada Highways Act, made possible the successful carrying out of the road programme.

Up to the end of March, 1927, 7,438 miles had been completed out of a total of 8,415 provided under the agreement. This mileage was constructed under the provisions governing the federal subsidy whereby the Dominion Government undertook to furnish 40 per cent of the cost, the provinces taking care of the remaining 60 per cent. The federal appropriation amounted to \$20,000,000 and the estimated cost of the highways was \$48,000,000. Of this the federal government in March, last, had provided \$18,775,002 out of an estimated \$18,775,002 of \$19,396,358.

All provinces moved eagerly to take advantage of the grant and co-operated up to the full extent so that no appreciable benefits are spread generally over the Dominion. The total amounts received by the provinces are: Prince Edward Island, \$603,450; Nova Scotia, \$1,468,729; New Brunswick, \$1,183,845; Quebec, \$4,718,420; Ontario, \$9,824,000; Manitoba, \$1,355,219; Saskatchewan, \$1,984,294; Alberta, \$983,580; and British Columbia, \$1,251,505.

## Giving Lessons On Walking

Vienna is Holding a "Pedestrians Week" For This Purpose.

People who walk on the streets of Vienna do so in an improper manner, the police authorities claimed in announcing a "pedestrians week" when they will try to teach the public how to use the streets. A large body of trained policemen will daily invade all the principal thoroughfares, detain the impatient citizens and demonstrate to them how they must follow, cross, overtake and pass each other on the sidewalks and where and how to cross the streets.

Traveler (on boat): "You were sick the first three days of the trip and the captain gave you leave? Did you go for it?"

The New Deck Hand: "I didn't need to ask."

In the subterranean mining districts of 14 years of age are full-time wage earners.

Unless a man has scored at least one failure he is unable to appreciate success.

## THE SUGAR JACK SYSTEM OF FEEDING

Does Not Seem To Improve the Nutritive Value Of Roughage

The "Sugar Jack" process is a method recently put on the market for the utilization of dry, coarse and unpalatable forage. It is an emulsification in which a so-called "converter," the Sugar Jack Converter, is used to moisten the dry forage before it is placed in the press or small silo. An experimental investigation of this process has been made by the Animal Husbandry Division at the Central Experimental Farm and the results published in a new bulletin entitled "The Conversion Of Dry Roughage Into a Succulent Feed."

Analysis of the "Sugar Jack Converter" has shown it to consist largely of common salt alone, alkali lime and a little vegetable matter. In fact warm water alone, and warm water with common salt used to replace the Sugar Jack Converter, proved to be as satisfactory in the processing as did the solution of the converter. Judging from the results of practical feeding tests and from chemical and bacteriological analysis, Sugar Jack processing does not add to or improve the nutritive value of the dry roughage. In the feeding trials the Sugar Jack ration produced considerably less milk than silage and was more expensive.

The production of milk and fat from the consumption of the unprocessed dry roughage was equal to that from similar roughage processed by the Sugar Jack system, and the dry roughage was equally palatable. Besides, the Sugar Jack system requires much more labor than is necessary in feeding either corn silage or unprocessed roughage. As a matter of fact the Sugar Jack process is simply a development of an old fashioned method of feed preparation long since discarded in favor of modern methods such as the silo. The bulletin is distributed by the Publications Branch of the Department of Agriculture, Ottawa.

## Blazing The Trail

Brain Is Like Forest and Thoughts Are Just Paths

The brain is like a dense forest, and our thoughts are backwoodsmen blazing a trail. When once a certain thought has passed through it, it is easier for the same kind of thought to come again. That is habit. Fold a piece of paper, then spread it out. It is easier to fold it again in the same crease than in any other way. That is habit. So, to create a habit of cheerfulness, we must send cheerful thoughts along again and again until the trail in our minds is thoroughly blazed. Then it will be easy to be cheerful.—R. P. Anderson.

## An Essential For Good Butter

Care Of Cream Is a Most Important Factor

Without a fine quality of cream it is impossible to make a good class of butter. Not only must be produced from healthy, properly fed cows, but it must be cared for so as to preserve it in fine condition. The production and care of cream involves many considerations that are systematically and clearly presented in Pamphlet No. 37, of the Department of Agriculture, at Ottawa, "The Care of Cream For Buttermaking." This circular enumerated the various causes of deteriorated cream and tells how this may be avoided, when the delivery or cream by the patron is done only twice a week, it is recommended that it be kept down to at least 48 degrees, requiring the use of ice. The circular urges upon the creamery owner to see that his equipment is such that the cream is handled in the most efficient way, that the testing is done accurately, and that the creamery itself is a model of cleanliness and a standing object lesson to the patrons.

## Honored By His Majesty

The King has appointed the Earl of Athlone, Governor-General of South Africa and brother of Queen Mary, a Knight of the Order of St. Michael and St. George. The Duke of Abercorn and Baron Desborough have also been appointed Knights of the Garter. The Knights of the Most Noble Order of the Garter were instituted in 1249.

The Columbia lodged in the Canadian Rockies covers 150 square miles and is the source of streams flowing to three oceans.

HEAD AND SHOULDERS OR FULL LENGTH?

"The principal thing to get in are the football and cigarette!"—Dorff, Berlin.

## Sheep Club Work

More General Interest Is Created and Better Results Obtained

Sheep clubs, wherever established, usually become the center of general sheep raising activity. Youthful members bring enthusiasm into their new enterprise, and as a result of their well directed efforts succeed in their undertaking. These clubs, organized by government sheep promoters, feed, and assist in getting their foundation stock, are started off on correct lines. An incentive is given the members not only to make the most of their sheep but to spread the information they receive in their experience and otherwise throughout the districts in which they live. In the Okaville District, in the Province of Manitoba, a sheep club has been well established. One of its members, Mr. James Bartlett, has undertaken to popularize sheep raising by making public his view in an easy he has prepared on "Sheep and Their Care in Manitoba." His experience leads him to believe that to succeed with sheep raising is to succeed in a natural thing for a live stock. He recommends that an intimacy with the members of his flock, which he has learned by experience to be found profitable in their well doing.

After describing the several breeds of sheep popular in Canada, Mr. Bartlett gives advice on starting the flock. The ewes, he says, can be purchased in August and September cheaper than at any other time of the year, and by buying at that time the heavy milking ewes can be picked out. The fleece is also sufficiently developed at that time to help one to judge not only of its character but of the natural conformation of the stock. Mr. Bartlett regards the winter housing as an important feature in sheep raising. He recommends giving the flock shelter from the wind and rain, and offers some suggestions against close housing which would lead the stock to perspire and contract colds. As a general winter feed, good hay and straw are recommended, but towards lambing time a small ration of oats will be needed, particularly for those that are at thin condition. A dry buck is most important for plenty of exercise, and a supply of clean water and salt always available should be the stock through the year in fine condition to produce vigorous lambs and to nourish them well.

## LEGAL NOTICES

### NOTICE TO CREDITORS AND CLAIMANTS

In the Estate of OSCAR ALAN MOORE late of the Post Office of Nihil, Farmer, deceased.

NOTICE is hereby given that all persons having claims on the estate of the said Oscar Alan Moore, who died on the 10th day of December, 1925, are required to file with the undersigned Administrator of his Estate by the seventh day of June, 1928, a full statement duly verified, of their claims and any securities held by them, and that after that date the Administrator will distribute the assets of the deceased among the parties entitled thereto, having regard only to the claims of which notice has been filed or brought to his knowledge.

Dated this 14th day of April, 1928.  
THE TRUSTS AND GUARANTEE COMPANY LIMITED, 220 Eighth Avenue West, Calgary, Alberta, Canada; H. A. Howard, Manager.

### MORTGAGE SALE OF FARM PROPERTY

Pursuant to the directions of the Registrar and by virtue of the Power of Sale provided by The Land Title Act under a certain mortgage which will be produced at the time of the sale, there will be offered for sale by public auction at the Post Office in the Village of Oyen in the Province of Alberta on Saturday the 26th day of May, 1928, at the hour of 2 o'clock in the afternoon, the following property, namely:

The North East Quarter of Section Fourteen (14) in Township Twenty-eight (28) and Range Four (4) West of the Fourth Meridian, reserving to the Crown all mines and minerals and the right to work the same.

Terms of sale to be twenty per cent cash at the time of sale and the balance according to the terms and conditions to be made known at the time of the sale or upon application to the vendor's solicitors.

The above property will be offered for sale subject to a sealed reserved bid and free from all encumbrances, save taxes for the current year. A reserve bid is to be made at the time the above property is situated about 5 miles from the Village of Oyen and 100 acres are under cultivation. For further particulars and conditions of sale, apply to: Thomas Leen, Oyen, Alberta.

Dated this 20th day of March, A.D.

Approved 'W. Forbes' Registrar.

## The Oyen News

### Danish Consul in Northern Alberta

H. P. Madison of the Edmonton City Dairy has been appointed Danish Consul for northern Alberta, with headquarters at Edmonton. Increasing Danish settlement, estimated at 2,700 in 1927, is given by the Danish Government as the reason for the establishment of the consulate. While no definite arrangements have yet been made as to the territory which will be served by Mr. Madison, it is expected that this will be from Red Deer north.

Rapid extension of the Alberta Wheat Pool elevator system is being undertaken this year. Eighteen country elevators are now being built and eight have been purchased. The system will be extended by the addition of at least a hundred elevators this year. Experience in operating the Wheat Pool has shown that line and terminal elevators are imperatively required in order that members may be given the greatest possible protection that would grades of wheat may be readily obtainable when the demand has arisen, and that the greatest possible savings may be effected. Over 600 men are now working on the new terminal elevator being erected by the Alberta Wheat Pool at Vancouver. This elevator will be completed by September 1st.

### Here and There

(15) Quebec—Quebec is taking advantage of the Federal legislation of last year known as the Canadian Farm Loan Act, which provides for loans to pioneers, whereby the Federal Government provides 90% of the money, the province 5%, and the borrower himself the remaining 5%.

This year's largest lot of settlers destined for the west recently arrived on two of the liners of the Canadian Pacific fleet. There were 102 on the Montclair and 800 on the Melita, the majority being of British birth, thereby establishing a record for any individual ship docking at the Maritime Province ports this year.

A recent revision of the Customs regulations now enables settlers bringing their sporting equipment or camera into Canada without leaving a deposit on account of their dutiable value, with the Canadian Customs officers at the border. At the present time the change in the regulations will effect particularly the Pacific Coast, where golf and spring sports are in full swing.

Vancouver—Over 100 miles of trucking serving the ports of the Vancouver district will shortly be taken over by the Canadian Pacific Railway, according to a statement issued by the general superintendent of the district. The truckage is designed to take care of a steady and normal growth in trade through Vancouver and also to handle expansion in western grain movement which this year has reached the record of \$3,000,000 bushels.

John Walter, co-proprietor of the London Times with Major the Hon. J. J. Astor, arrived in Montreal lately where he addressed a gathering under the auspices of the National Council of Education. Mr. Walter is covering the Dominion over Canadian Pacific Railway lines and will make addresses in most of the larger cities. He is the fifth member of the family being a direct descendant of the famous John Walter, to be guide of the newspaper since 1785.

On a long trip from Ontario to Brussels, Belgium, forty muskrats lately left Canada aboard the C. P. S. S. Marham bound for Antwerp. The final destination of these animals is a farm near Brussels where they will form the nucleus of a muskrat farm. While handled by the Canadian Pacific Express Company during the entire voyage, the animals were fed two ounces of oats and four ounces of carrots daily with water once every two days.

Saskatoon—"I believe I have found a wheat which, when further developed, will be greatly resistant," said Dr. S. S. Wheeler, several times winner of the International wheat award competition, to explain that although he was aware that this new wheat which he developed from the Iowa strain would protect crops in the province from rust damage, he did not think that the wheat would be absolutely free from rust under all conditions. However, he considered from the results of his experiments that the wheat under the worst conditions, such as those of 1927, this wheat would never materially be damaged.

Over 600 new families arriving in Canada this year with limited capital can be looked after and settled advantageously in Alberta by the various provincial agencies of the Canada Colonization Association, according to reports submitted by various representatives at the annual Alberta convention just concluded at Calgary. The objective first set was 400 families, but a survey showed that at least 200 more settlers could be made. T. O. F. Herzer, manager of the association, reported that during the past three years 486 families had been settled in Alberta on 122,526 acres of land, of which 143,891 acres settled last year.

### SPRING IS HERE AND ANDY BURSTS FORTH INTO SONG

To the Editor:

Just wrote a poem of town at home. It's de ad re-construction, if you dare print this rhyme, take him! Do so by own instructions; I was not ripe, to use this type, far less my inclination, but read it through, its errors too, Thanks in anticipation.

\*\*\*

Oyen Town

Who said this town be all and naught? Because by conflagration sought. And yet we can't but justly say Destructive flames did rage on day. At with the most reluctant eye We saw the smoke make black the sky.

And more we mourned more things we misad. When fate this town untakenly kissed.

Along the upper end of lane For Miller's goods we gazed in vain. And Harbours' were in ashes laid His dentist's chairs and teeth decayed.

There Stewart's stand had lost its wall. And Parcel's store not seen at all. Then all the butcher's beef and pork Was served without a knife or fork.

And Billy shouts no more shall burn, Just turn the flames were quenched in turn.

Then all the fire fighters fair Proclaimed, 'tis still within repair. Where stood old butcher's haunt we view

Complete new store was raised in lieu.

And 'twixt a Parcel's roof and floor Were stored new goods—not those of yore.

Here shifts my bell or tune of chime Just while across this pit we climb. By strides I land at Snyder's beat.

An edited line times twelve feet. Next to the south and east were bound.

For Miller's floor to dance around; While rays of sun at morning play. Reflect on pane at Kerr and May. Will say no more of town sold.

For fear that Iun may feed me on. Though let us mention Jim the Smith. Who lost his place but not his grit.

At Stewart's stand we all must meet. And Oyen News next door repeat. Who said a flame laid waste this town? To such we make a face and frown.

—Andrew Oyen.

# Hardy Norse Explorers Make Trip To Barren Lands On The Coppermine River

Walking the echoing silences disturbed only at long intervals by white men over the centuries, two young Norwegians—Hjalmar Nelson-Dale and Helge Ingstad—are today, if all has gone well with them, beating their dangerous way back across the barren lands from the headwaters of the Coppermine River.

Only twice in the last 160 years, so far as is known, have white men penetrated to the source of the river in the mysterious hinterland through which the Coppermine flows.

His discovery was made in 1772 by Samuel Hearne, following an earlier attempt in 1769, when the desertion of his Indians compelled abandonment of the effort.

Hearne's successful expedition of 1770-1772 was marked by the massacre—which he was unable to prevent—of a peaceful Eskimo tribe by his own Indians, and history has marked that fateful spot on the map of the Northwest with the name of "Bloody Falls," the slaughter occurring close by some falls on the Coppermine River.

Then in 1821 came the thrilling and ill-fated Franklin expedition, which traversed 5,500 miles out and back across the barren lands from Inuit, son, say, to leave the bones of many of its members lying in the inhospitable arctic where the survivors dropped their weary way.

Another 100 years almost elapsed until, in 1924, G. M. Blane, of Ottawa, made his brilliant dash into the

unknown to discover the outflow of water through a rock wall of an elevated lake from whence, looking northwest toward the Arctic, the peaceful, Coppermine meandered slowly through a broad plain dotted with herds of caribou, to the shores of the Northern Sea.

It was in the summer of 1927 that the two young Norwegians—Nelson-Dale was born in Canada, and so is Norse-Canadian—left Edmonton for Fort Resolution, there to start out on the first leg of their hazardous journey.

In July, 1927, they wrote to O. C. Boness, Edmonton lawyer, that they were leaving Resolution—last outpost of civilization in a few days and that if all went well they hoped to reach the Coppermine River in the fall of that year, spending a year in the "iceberg country," and returning to civilization by dog train.

The fall of 1928 should see the two adventurers safely back provided they have met with no untoward incidents. Ingstad is a qualified attorney-at-law in Norway and for some time was correspondent for "Tidens Tegn," the largest newspaper in that country.

His partner has hunted and tramped across the north for some years and went north with Ingstad after a trip home to Norway in 1920-27.

Neither adventurer apparently was aware before he left that Mr. Boness had preceded them by three years in their attempt to reach the Coppermine River head waters.

Smart Sporty Frocks Are Simply Fashioned

A stunning one-piece frock is pictured here, with all the fashion interest centered in the front, leaving the back plain, in the new manner. Three set-in plaits give added width to the lower part of the skirt. The deep V-shaped front and vestee are of the latest mode, while the round collar and flared cuffs may be trimmed with frilling. Buttons—an important feature this season—adorn this attractive model, and a ribbon tittle crushed into a front closing buckle adds a final air of chic. No. 1479 is for misses and is in sizes 16, 18 and 20 years. Size 18 requires 3 1/2 yards 28-inch material, or 3 1/2 yards 24-inch, and 1 1/2 yards 6-inch ribbon for belt. Price 25 cents the pattern.

The Duchess of York recently owned the new half-million dollar home for nurses at the Kingston and District Hospital, Kingston Hill, England. She was photographed while strolling through the grounds after the ceremony.

Personality Can Be Changed  
Roosevelt Was Example Of What Person Can Do

Personality is a strange thing. Sometimes I think we are born with one special kind just as we are born with a certain nose and with hands whose finger prints are unlike any other in the world, and which can't be changed. But, on the other hand, if Theodore Roosevelt had allowed the personality he was born with to rule him, he would have gone through life a dependent anemic individual with a spirit weighed down by the despair of tuberculosis. But he pulled himself up and out of it. Sometimes I think anybody can do the same thing. And sometimes I think that selfishness is harder to cure even than a physical disease.

Mistress—It is very ungrateful of you to leave. Haven't we always treated you as one of the family?  
Servant—Yes. That is why I am leaving.  
He: No. Fortune has never knocked at my door, but his daughter often has.  
She:—His daughter?  
He: Yes—Miss Fortune.

# Canadian "Moth" Planes Are Helping To Combat Spread Of Wheat Rust In West

How Canadian "Moth" planes are helping to fight wheat rust in the West is told in a statement made public by the Department of Agriculture, as follows:

"It would be almost impossible to imagine two more widely separated things than an aeroplane and the rust which attacks our wheat. Yet we find the Royal Canadian Air Force co-operating with the Department of Agriculture through the Dominion plant pathological laboratory at the Manitoba Agricultural College, Winnipeg, in the great work being done by Drs. D. L. Bailey and C. H. Gouden in studying and formulating a plan of control for one of Canada's worst and most costly enemies.

"The aeroplane has been extensively used for the purpose of locating diseased conditions in our forests, and also in dusting from the air for the control of the spruce budworm. The planes, however, have been used in connection with wheat rust and consists mainly in the exposure of slides at different altitudes and in different locations. These aeroplanes postures attempt to collect from altitudes of from one to five thousand feet the date of the earliest appearance of rust spores the region over which they first appear, the rate at which the spore content of the air increases over various regions, the visibility of spores caught at these higher altitudes, and the relation of certain environmental and climatic factors to the rate of development and spread of rust.

"The air force stations at Lac du Bonnet, Norway House, Cormorant Lake, and High River, have assisted in this work. Each station is supplied with lightly stoppered bottles containing wooden paddles to which are attached microscope slides slightly smeared with vasoline. These slides are exposed for 15 minutes of varying altitudes, the slides replaced in the bottles and then returned to the Government laboratory at Winnipeg.

"In one instance at Lac du Bonnet a surprisingly high number of spores was caught on a slide, which seemed to indicate the plane at an altitude of 5,000 feet had travelled through a pocket or eddy of air where the concentration of rust spores was very dense. Where the spores originated is speculative, but the fact that at the time threatening was being done at Morden, where there was a heavy local outbreak of rust seems to point to that district as the originating point. When the patchy nature of these outbreaks is considered, one is led to suspect that there may be some relation between these clouds or eddies of air and localized heavy field infections. One can well imagine a rain washing down these spores on a more limited area, where they would germinate and produce a heavy infection.

"The Department of Agriculture has proved on several occasions the efficiency of the aeroplane in many lines of investigation, and the day may not be far distant when "Moths" will be as common in our agricultural communities."

TRANS-CANADA HIGHWAY  
Construction work on the last part of the trans-Canada highway will be started next month. The bulk of the last link between Newmarket and Golden, B.C., will complete a motor highway across Canada from Halifax to Vancouver. The above illustration shows the route and indicates the portion just being completed.

Measuring the Rainfall  
One Inch Means Over 113 tons of Water To The Acre  
You have often seen the statement that the rainfall during the past week has been so many inches. Do you have an adequate idea of what this means? Few people have.

You read in the weather bulletins that two or three inches of rain means half a ton in a day, but these figures really convey very little information, and give no idea at all of the probability of nature.

An acre contains 6,272,500 square inches of surface, and an inch of rain means, therefore, the same volume of cubic inches of water. A gallon contains 231 cubic inches of water, and an inch of rainfall means 27,025 gallons to the acre, and, as a gallon of water weighs 10 lbs., the rainfall on an acre is 270,250 lbs. Counting two inches, to the ton, an inch of rain means over 113 tons per acre.

How He Deciphered It  
Chemist Made Prescription From Badly Written Testimonial  
A young man was given a testimonial so shockingly written that he was unable to decipher it. A friend suggested that he should take it to a chemist, for chemists are skilled men, having spent long lives decoding what doctors call handwriting. So the testimonial was handed to a chemist.

"What do you make of that?" asked the young man. The chemist glanced over it for a moment and then disappeared behind a screen.

There was a subdued tinkle of glasses for a couple of minutes and then he emerged. "I think you will find that all right," he said handing over a bottle. "Half-a-crown, please!"

Peggy: "Oh, mummy, may I go to the fancy-dress party as a milkmaid?"  
Peggy: "Then why can't I go as a condensed milkmaid?"

Nervous Youth—"Daring, you are the breath of my life!"  
Fair One—"Well, why don't you hold your breath?"

Doubter is now believed to be the equivalent of a man who is unable to withstand the pressure of great sorrows.

German Settler Booms Canada  
During Trip To Household Industries Thirty Young Men To Migrate To Dominion

Carl Schulz, of Trierstadt, Brandenburg, Germany, who came to Canada a year ago and purchased 1,000 acres of unbroken land, on the Canadian National Railway near St. Walburg, Saskatchewan, proved to be a good colonization agent for Canada. Following his purchase he returned to Germany to settle matters regarding his estate there and while in his homeland he talked the gospel of Canadian opportunity. The result was that when he returned to Winnipeg recently he brought with him thirty promising young men and an inch of rainfall means 27,025 gallons to the acre, and, as a gallon of water weighs 10 lbs., the rainfall on an acre is 270,250 lbs. Counting two inches, to the ton, an inch of rain means over 113 tons per acre.

Johny: "Is sister going to have all this?"  
Mother: "No, my darling. This is for you."  
Johny: "So little!"

A Scotsman ran up to a doctor in a state of great agitation. "Come at once," he said, "my wife's brain has swallowed a sorcerer." "How old is it?" asked the doctor.

"1864."

"This is intolerable. I have found a button in the soup."  
"Lucky soup. The management got drunk and spilled a button in the soup," said a waiter who discovered a button in the soup.  
—Buen Humor, Madrid.

BRITISH NAVY PROMOTIONS  
At the youthful age of 42, Capt. Gordon Campbell (V.C.), (left), has just been made rear-admiral in the British Navy. Vice-Admiral Sir Frederick Field (centre), has been promoted admiral, and Admiral Freemantle has been placed on the retired list at his own request in recent navy changes.

Build Mammoth Grain Elevator  
New Wheat Pool Elevator At Fort William Will Be Most Modern For The Continent

The board of directors of the Saskatchewan Co-operative Wheat Producers, Limited, has awarded the contract for the erection of the superstructure of Pool Terminal No. 7, Fort Arthur, to the Harrett McQueen Construction Company, Fort William, Ont.

This new terminal elevator, which is being built by the Saskatchewan Wheat Pool, will be the most modern and the fastest terminal elevator of its kind on the North American continent, according to C. D. Howe, of C. D. Howe & Co., consulting engineers, Fort Arthur. It will have two stores of 2,000,000 bushels each, in addition to a work house with a capacity of 500,000 bushels, and it will be able to take delivery of 300 cars of grain in ten hours, or 600 cars per day during the rush season. It will have a shipping capacity of 100,000 bushels per hour, and a drying capacity of 1,000 bushels per hour.

Large Area Of Forest Land  
Of the total non-agricultural area of Canada about one-half can be made to produce timber crops if permanently dedicated, protected, and managed to that end. Investigations show that the only economic use for one-third of the land area is in the growing of wood.

"Where do the old auto go?"  
"They don't."

Stouling More Buffalo North  
It is expected that some 1,100 head of buffalo, mostly year-olds, will be shipped from the Wainwright Park, Alberta, early in June to the range in the far northern part of the province, where during the past three years several thousand head have been transferred. The former members of the plains have increased so rapidly in their sanctuary at Wainwright that their numbers have far exceeded the carrying capacity of the pasture in the park.

The average man's word is considered as good as his bond—by a stranger.  
The proudest moment in a successful man's life is when he tells how he got there.

# PRaises Canadian Hospitality

Baron Perenyi, Minister of the Interior for the Republic of Hungary, who visited the Hungarian settlements adjacent to the lines of the Canadian National Railways in Western Canada recently, expressed himself as much impressed by the help which Canadian-born citizens are giving newly arrived Hungarians in settling on the land and generally establishing themselves in Canada. "Canada is a place where anyone can make an honest living with hard work," His Excellency said. "All that has been said of Canada is true. It is a land of real opportunity and I shall certainly come back again where I find so many of my countrymen happy, contented and prosperous."

The photograph shows Baron Perenyi on the left and Alister Polz, noted Budapest editor on the right. Mr. Polz visited Canada three years ago and published a book, "The Hungarians in Canada," which attracted many Hungarians to Canada.

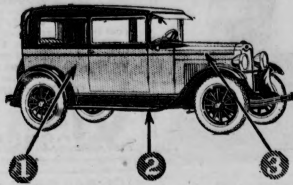

## THE HIDDEN PLACES

WHERE QUALITY COUNTS MOST

**① Body** The emblem "Body by Fisher" stands for modern styling, safe, substantial construction . . . lasting beauty, and a score of important contributions to your comfort.

**② Chassis** Compare the "Bigger and Better" Chevrolet Chassis with any other car in the low-price field. Look at its rugged, 4 1/2" deep steel frame, its sturdy cross members, its long semi-elliptic shock-absorber springs, its safety gasoline tank in rear, its one-piece, banjo-type rear axle of enormous strength and ready accessibility. Check the four-wheel braking system and the independent set of emergency brakes.

**③ Engine** Look beneath the stylish hood of the "Bigger and Better" Chevrolet. See that sturdy, valve-in-head engine (the most powerful type of automobile engine yet designed), fully enclosed and protected. Note the A.C. Oil Filter, the A.C. Air Cleaner, Crankcase Breather System, Oil Pump. Notice the new alloy "Invar-Strut" pistons . . . the new hydro-laminated camshaft gears . . . the high grade electrical equipment.

The G.M.A.C. . . General Motors' own deferred payment plan affords the most convenient and economical way of buying your Chevrolet on time.

## About Town and Country

Monday, May 7th, has been named by the Lieutenant Governor in Council as Arbor Day in Alberta.

A pleasant afternoon was spent at the United Church manse yesterday, when Mrs. H. C. Woods presided, at a kimono tea, given under the auspices of group 3 of the Ladies Aid. Mrs. W. T. A. Walker won the prize, a tea pot, cream jug and sugar bowl.

At the annual meeting of the local subdivision of the C.W.L. the following were appointed officers for the ensuing term: President, Mrs. (Dr.) Swartzlander, 1st vice-president, Mrs. C. Reil; 2nd vice-president, Miss Mildred Thomas; 3rd vice-president, Mrs. A. Kaster; secretary, Mrs. J. H. Quinn; treasurer, Mrs. W. B. Dobbin.

### WEDDING

THOW—APPLEBY

A quiet though pretty wedding was solemnized at the home of Mr. and Mrs. W. J. Scrivens, on Wednesday afternoon, April 25, 1928, when Mr. Letitia Appleby of Toronto, became the bride of Mr. Archibald Thow, of Oyen. Rev. H. C. Woods, of Oyen United Church, officiated in the presence of a few relatives and friends.

Following the ceremony a bountiful wedding breakfast was served by the hostess, Mrs. Scrivens.

The bride was becomingly attired in blue satin and her going away dress was of blue Canton crepe with coat and hat to match. After a short honeymoon the newly wedded couple will reside in Oyen.

A sale of afternoon tea, home cooking, house and building plants, will be held at the home of Mrs. W. D. McPhail, on Saturday afternoon, May 12, under the auspices of All Saints' Women's Guild. 3 p.m. to 5:30 p.m.

Mr. Claus Franzen of Helmsdale district, it is reported, lost his house, barn, four granaries, over a 1000 bushels of wheat and a quantity of oat sheaves, when a stubble fire got out of control.

Don't miss the opportunity of seeing "Ben Hur" playing at Oyen Theatre on Thursday, Friday and Saturday, May 10-11-12.

Bee keeping in Saskatchewan made marked progress in 1927, there being an increase of 45 per cent in the number of colonies over those of 1926 and an increase of 191 per cent in the 1927 honey crop over that of the previous year. The number of spring colonies in 1927 was 2,860 which increased to 5,962 by the fall count. The production of comb honey for the year was 64,042 pounds and of extracted honey 438,932 pounds, making an average production per colony of 148 1/2 pounds.

Airplanes are now being used to herd vast numbers of reindeer in the big Arctic stock farms, according to Ralph Lomen, pioneer of the reindeer industry of Alaska. "It's a new idea and it's not being practiced regularly, but herding by air-planes seems feasible," said Mr. Lomen. "Our herd herdsman went out recently and in two hours accomplished as much as would otherwise have required a week with six men. There is room for 12,000,000 reindeer in the northern tundra of Canada and such a herd would be worth \$50,000,000. It could be done in 50 years if Canada started now in a modest way."

Immigrants are flowing into Canada at record rates since lately and Canadian Pacific steamers from Great Britain and Europe are bringing them over at the rate of shiploads of close on a thousand per ship. The majority are farmers, laborers of British and North European stock and are mostly going in the land in the Prairie Provinces with a fair proportion going to Ontario and the Maritime Provinces.

FOR SALE—Hay, broom and eye mixed. Will trade for cattle. Apply: C. F. Damsard, Sundridge.

On account of the large sale of tickets for the Ken Maynard show advertised for Monday, May 7, Group 2 of the ladies aid have made arrangements to have the show repeated the following evening, Tuesday, May 8. Ticket holders may attend either night.

### REWARD

Strayed from 9 miles north of Alask, 5 head of horses—Team light iron grey mares, foretops clipped, one branded 35 right shoulder—team dark iron grey mare and gelding—black mare, foretop clipped, branded same. Likely headed west. Phone: H. Bricker, 115, Sibbald, Alta.

"Establishing a New Standard in Automobiles"

*Finer, Faster*

**FINER** . . . because of the exclusive design of the Durant built Hayes-Hunt bodies . . . the superior grade of upholstery materials . . . the roominess of the interior and its easy riding qualities . . .

**Faster** . . . because of the studied refinements of the already famous Red Seal Continental "L"-head Motor . . .

See the new Durant Sixes . . . go for a ride in them . . . ask your local Durant dealer why they are "finer and faster" . . . ask him to compare the specifications with those of higher priced automobiles . . . then judge these cars for yourself . . . on their merits!

Built by  
**DURANT MOTORS OF CANADA, LIMITED**  
TORONTO - CANADA
